Thanks for joining!

**OOga** Technologies

WHATS NEXT:

You've been given access to look around and review available consulting projects! Let us know what you think!

Note: Not all projects are visible to the public, as some can be set to private by the project creator. Since you are new here in this space, _were offering you a personal demonstration_ showcasing some of the current projects and usages.

Lastly, we'd be happy to give you a _free trial to a paid account_ to _create your own projects_ upon request!

To bring you aboard we plan to discuss the following tutorials, with video's coming soon to the resource page.

- Project Types (Example on Page 2)
- NDT Auditing
- NDT Training
- NDT Remote Inspection
- NDT R&D Participation Groups
- How/Why to become OOGA Certified
- Features Coming Soon

NDT 4.0 ON A GAS LINE PROJECT

OOGA Technologies recently featured on Ted Danson's Advancements (Click here for video)

This Project was in support of Intel's $20 billion build for one of two new chip plants in Arizona By helping support a more rapid upload of CR (Digital X-Ray) Images thru a satellite feed directly to the OOGA Technologies platform; it was made readily available for review by multiple parties to ensure a healthy system. This is considered _Cost Avoidance_ thru increased quality. Once a pipe line is completed, it can be buried with confidence. For wear and tear other NDT 4.0 methods are used.

OOGA Technologies was happy to collaborate on a solution for all teams involved. _This should pave the way for remote inspection... stay tuned!_

PROJECT TYPES – REMOTE INSPECTION

What is a Project? A project is created to host an instance for on-line collaboration regarding: NDT Auditing, NDT Training, NDT Remote Inspection, R&D Participation Groups and More.
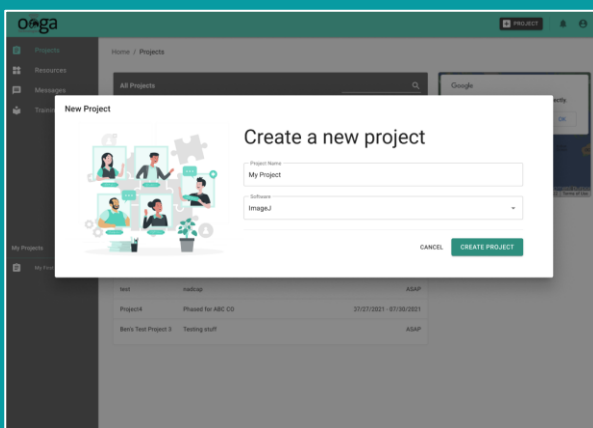

Consultant Point Of View

As a consultant the landing page you find after logging in should be showing you a list of projects you're already a part of combined with publicly listed projects that are available for consulting needs.

Coming Soon:

We are adding metrics to allow you a toggle / filter based on your profile preferences, and related industry certifications. This helps to easily match the consultant to project. Project owners find you easily.

Example:

There is a coming project that will accept NAS410 related certification for over inspecting welds on a gas pipeline as audit, and secondary containment of quality. Allowing you to review images from the comfort of your home.

Project Creator Point Of View

As a paid user, you can create a project for various reason above.

Additionally you can easily manage a fleet with in that process.

Coming soon:

Automatic dashboarding showing you status and communication as your projects are being completed in real time. Potentially with AI Backed Gage R&R real time for inspection data.

Example:

Each pipeline project may be ran by a selected manager in kind with their own internal hierarchy of control when sharing images, selecting consultants, or other project management duties.
